

LUNCH & LEARN

What Claude Can Do for Recruiting BI

A quick look at where AI tools fit in our BI stack — and what becomes possible when Databricks and Sigma get a natural language layer.

WHERE THINGS STAND

Claude Is Already in the Building

JPMC has been deploying Claude across the organization. This isn't a future bet — the infrastructure is live.

ACTIVE TODAY

- LLM SUITE
- INTERNAL PILOT
- COWORK (WAVE 3)
- CLAUDE CODE

"92% of CHROs expect AI to reshape recruiting workflows within 2 years."

— SHRM, 2025

The question for our team isn't whether to engage with these tools — it's knowing specifically where they add value for Recruiting BI.

OUR ENVIRONMENT

Three Layers, Three Roles

DATABRICKS

The data lakehouse. Pipelines, modeled data, cohort outputs. Genie provides in-platform natural language querying for analysts who have access.

GOVERNED · IN PLATFORM

SIGMA

Structured, governed reporting. Dashboards and defined metrics for stakeholders who need consistent views of recruiting data.

GOVERNED · REPORTING LAYER

CLAUDE

Natural language layer that sits across both. Pulls from Databricks or Sigma, formats outputs, and delivers them to people who don't have platform access.

AD-HOC · LAST MILE

Databricks and Sigma handle what analysts see. Claude handles what everyone else receives.

HOW THEY WORK TOGETHER

Genie Gets the Data. Claude Delivers It.

DATABRICKS GENIE

In-platform natural language querying. An analyst asks a question, Genie queries the lakehouse, returns a result — all inside Databricks.

FOR: ANALYSTS WITH DATABRICKS ACCESS

CLAUDE / COWORK

Takes that data (or queries Databricks directly via MCP) and packages it as a formatted report, email, or summary — for anyone who doesn't touch Databricks.

FOR: HIRING MANAGERS, RECRUITERS, LEADERSHIP

These tools aren't competing. Genie deepens what analysts can do inside the platform. Claude extends what the data can reach — to stakeholders who need the insight but not the interface.

WHAT THIS LOOKS LIKE FOR US

Where It Fits in Recruiting BI

EARLY CAREERS COHORT REPORTS High-volume, repeatable cohort data pulled from Databricks — formatted and delivered to program managers who don't have platform access. HIGH VOLUME · STRUCTURED DATA · REPEATABLE	AD-HOC PIPELINE SUMMARIES A recruiter or hiring manager asks a one-off question about their pipeline. Claude queries Sigma or Databricks and returns a plain-language answer or formatted summary. NO SQL · NO DATABRICKS ACCESS NEEDED
STAKEHOLDER BRIEFINGS Weekly or event-driven recruiting snapshots — drafted, formatted, and ready to send. Pulls from live data rather than manually assembled. REPLACES MANUAL TICKET WORK	CROSS-TOOL WORKFLOWS Claude connects Databricks, Sigma, Gmail, Slack, and Calendar in one workflow. Data pulled, formatted, and delivered — without toggling between platforms. MULTI-SYSTEM · NO CODE
QUARTERLY BUSINESS REVIEWS Pulling updated recruiting figures ahead of QBRs for senior HR and recruiting leadership. Claude queries the latest metrics from Databricks or Sigma and assembles a clean briefing — faster than the manual process. HIGH VISIBILITY · LEADERSHIP-FACING · REPEATABLE EACH QUARTER
